NORTHFIELD

T3001FS

Created for task seating applications with passive ergonomics in mind…

Multi-Task chairs are generally specified for 'Task Specific' uses such as administrative, data processing, switchboard, and customer service applications when the tasks at hand require long periods of seated work. The T3001FS (Floating Seat) Tilter from Northfield was developed with all this in mind. A responsive and versatile tilter, the T3001FS mechanism is designed for use on medium to large size chairs. The mechanism is equipped with Infinite Tilt Lock for independent back adjustment and a Top Activation lever for pneumatic height adjustment. The T3001FS series can also be outfitted with several separate back adjustment options to complete your chair requirements.
